Tips on Navigating the Codebook

This document is a detailed codebook that describes each variable in the Medicare encounter records file. Because the files have such a large number of variables, we have included several ways for analysts to quickly find the information they need.

- A complete listing of all variables in the files, in alphabetical order based on their SAS variable names.
- Individual entries for each variable that contain a short description of the variable, the possible values for the variable, and, in many cases, notes that discuss how the variable was constructed and should be used.

We have included hyperlinks throughout the codebook to make it easier for analysts to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents will take you to the detailed description for that variable.
- From the detailed description for any individual variable, clicking on the ^Back to TOC^ link after each variable description will take you back to the Table of Contents.

ADMTG_DGNS_CD

LABEL: Claim Admitting Diagnosis Code

DESCRIPTION: A diagnosis code on the institutional encounter indicating the beneficiary's initial diagnosis at admission.

This diagnosis code may not be confirmed after the patient is evaluated; it may be different than the eventual diagnoses (e.g., as in PRNCPAL_DGNS_CD or ICD_DGNS_CD1–25).

CLM_CHRT_RVW_SW

LABEL: Claim Chart Review Switch

DESCRIPTION: This variable is used to indicate whether the encounter record is a chart review record. Chart reviews are a type of encounter data record that allow Medicare Advantage Organizations (MAOs) to add or remove diagnoses that they identified through medical record reviews that were not initially reported on encounter data records.

COMMENT: This is an indicator value that is set to 'Y' when MAOs report diagnoses obtained from medical record reviews (i.e., chart reviews) that were not initially reported on encounter data records when the MAO submitted the encounter. Otherwise, the value is set to null.

Chart review records may be submitted for any service type (including services that are not eligible for risk adjustment), and there are no limitations on the number of chart review records in totality or per encounter.

Additional details regarding the meaning and use of chart review records can be found in the Medicare Encounter Data User Guide.

COMMENT: Multiple iterations of a single service (i.e., a particular type of claim for a specific service date for the person) are present in the Encounter RIFs; records are not limited to the final version of the encounter record. When multiple records for a service exist, the higher the claim control number, the later it was adjusted (i.e., the highest CLM_CNTL_NUM is the latest version of the encounter).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. COMMENT: This field, in combination with the service classification type code (variable called CLM_SRVC_CLSFCTN_TYPE_CD) indicates the "type of bill" for an institutional claim. Many different types of services can be billed on a Part A or Part B institutional claim, and knowing the type of bill helps to distinguish them.

The type of bill is the concatenation of two variables:

—facility type (CLM_FAC_TYPE_CD)

—service classification type (CLM_SRVC_CLSFCTN_TYPE_CD).

Note that sometimes 3 variables are used for "type of bill", where the 3rd digit is the claim frequency code (CLM_FREQ_CD).

P = Adjustment required by QIO
Q = Claim Submitted for Reconsideration Outside of Timely Limits

COMMENT: This code is used for encounter final action processing for all encounter claim types, including carrier.

The encounter bill type frequency codes utilize a similar nomenclature to Medicare fee for service bill type frequency codes. This field can be used in determining the "type of bill" for an institutional claim. Often the type of bill consists of a combination of two variables: the facility type code (variable called CLM_FAC_TYPE_CD) and the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD).

This variable serves as the optional third component of bill type. Many different types of services can be appear on an encounter institutional claim, and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of three variables: the facility type (CLM_FAC_TYPE_CD), the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD), and the claim frequency code (CLM_FREQ_CD).

A three-part type of bill is the concatenation of three variables:

—facility type (CLM_FAC_TYPE_CD)

—service classification type (CLM_SRVC_CLSFCTN_TYPE_CD)

—claim frequency code (CLM_FREQ_CD).

COMMENT: The "from" date on the claim may not always represent the first date of services, particularly for Home Health care. To obtain the date corresponding with the onset of services (or admission date) use the admission date from the claim (variable called CLM_ADMSN_DT for IP, SNF and HH.

For Part B Non-institutional (Carrier and DME) services, this variable corresponds with the earliest of any of the line-item level dates (i.e., in the Line File, it is the first CLM_FROM_DT for any line on the claim). It is almost always the same as the CLM_THRU_DT; exception is for DME claims — where some services are billed in advance.

CLM_THRU_DT

LABEL: Claim Through Date

DESCRIPTION: The last day on the billing statement covering services rendered to the beneficiary (a.k.a. 'Statement Covers Thru Date').

SHORT NAME: CLM_THRU_DT

LONG NAME: CLM_THRU_DT

TYPE: DATE

LENGTH: 8

SOURCE: Medicare Advantage Organizations (MAOs)

FILE(S): All encounter files

VALUES: —

COMMENT: The "thru" date on the claim may not always represent the last date of services, particularly for Home Health or Hospice care. To obtain the date corresponding with the cessation of services (or discharge date) use the discharge date from the encounter (variable called BENE_DSCHRG_DT).

For Part B non-institutional (Carrier and DME) services, this variable corresponds with the latest of any of the line-item level dates (i.e., in the Line File, it is the last CLM_THRU_DT for any line on the claim). It is almost always the same as the CLM_FROM_DT; exception is for DME claims — where some services are billed in advance.

These are 5-position alpha-numeric codes in the W, X, Y or Z series representing physician and non-physician services that are not represented in the level I or level II codes.

Note 2:

This field may contain information regarding case-mix grouping that Medicare used to pay for SNF, home health, or IRF services. These groupings are sometimes known as Health Insurance Prospective Payment System (HIPPS) codes.

This field will contain a HIPPS code if the revenue center code (REV_CNTR) equals 0022 for SNF care, 0023 for home health, or 0024 for IRF care.

The diagnosis version code applies to all diagnoses on the claim (i.e., diagnoses appear in variables ICD_DGNS_CDX).

This field is not present in the institutional claims (inpatient, skilled nursing, home health) since the cutover occurred exactly on October 1, 2015. Although this cutover date applies to carrier/DME claims, there are some instances where a billing date could straddle the cutoff date (e.g., DME ordered vs. received dates), therefore we include this field to enable verification as to which codes are used.

COMMENT: The ICD-9-CM codes were named as the HIPPA standard code set for inpatient hospital procedures. For inpatient and skilled nursing claims, health care providers use the International Classification of Diseases version 9 (ICD-9) procedure codes to describe the service provided. Starting in October 2015, the ICD-10 Procedure Coding System (ICD-10-PCS), is used.

HCPCS/CPT codes were named as the standard code set for physician services and other health care services.
