Tips on Navigating the Codebook

This document is a detailed codebook that describes each variable in the Medicare encounter records file. Because the files have such a large number of variables, we have included several ways for analysts to quickly find the information they need.

- A complete listing of all variables in the files, in alphabetical order based on their SAS variable names.
- Individual entries for each variable that contain a short description of the variable, the possible values for the variable, and, in many cases, notes that discuss how the variable was constructed and should be used.

We have included hyperlinks throughout the codebook to make it easier for analysts to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents will take you to the detailed description for that variable.
- From the detailed description for any individual variable, clicking on the `^Back to TOC^` link after each variable description will take you back to the Table of Contents.

This section of the codebook contains a list of all variables in alphabetical order based on the SAS variable name.

Variable Details

This section of the codebook contains one entry for each variable in the encounter records file. Each entry contains variable details to facilitate understanding and use of the variables.

**ADMTG_DGNS_CD**

LABEL: Claim Admitting Diagnosis Code

DESCRIPTION: A diagnosis code on the institutional encounter indicating the beneficiary's initial diagnosis at admission.

This diagnosis code may not be confirmed after the patient is evaluated; it may be different than the eventual diagnoses (e.g., as in PRNCPAL_DGNS_CD or ICD_DGNS_CD1–25).

COMMENT: On October 1, 2015 the conversion from the 9th version of the International Classification of Diseases (ICD-9-CM) to version 10 (ICD-10-CM) occurred. ICD-10 has more than 70,000 unique diagnosis codes compared to approximately 14,000 ICD-9 codes, which allows for more detail surrounding diagnoses.

**BENE_ID**

**LABEL:**  Encrypted CCW Beneficiary ID

**DESCRIPTION:**  The unique CCW identifier for a beneficiary.

The CCW assigns a unique beneficiary identification number to each individual who receives Medicare and/or Medicaid, and uses that number to identify an individual’s records in all CCW data files (e.g., Medicare claims, Medicare encounter, MAX claims, and MDS assessment data).

This number does not change during a beneficiary’s lifetime and each number is used only once.

The BENE_ID is specific to the CCW and is not applicable to any other identification system or data source.

If we could not find a state using this method, we set the variable equal to the state portion of the beneficiary’s SSA state/county code. If that failed, we set the state equal to null.

There are additional E code fields available in this file. The lower the number in the variable name, the more important the diagnosis in the patient treatment/billing (i.e., ICD_DGNS_E_CD1 is considered more important than ICD_DGNS_E_CD9).
**CLM_ADMSN_DT**

**CLM_CHRT_RVW_SW**

**LABEL:** Claim Chart Review Switch

**DESCRIPTION:** This variable is used to indicate whether the encounter record is a chart review record. Chart reviews are a type of encounter data record that allow Medicare Advantage Organizations (MAOs) to add or remove diagnoses that they identified through medical record reviews that were not initially reported on encounter data records.

**SHORT NAME:** CLM_CHRT_RVW_SW

**VALUES:**  
Y = Record is a chart review  
Null/missing = Record is not a chart review

**COMMENT:** This is an indicator value that is set to ‘Y’ when MAOs report diagnoses obtained from medical record reviews (i.e., chart reviews) that were not initially reported on encounter data records when the MAO submitted the encounter. Otherwise, the value is set to null.

Chart review records may be submitted for any service type (including services that are not eligible for risk adjustment), and there are no limitations on the number of chart review records in totality or per encounter.

Additional details regarding the meaning and use of chart review records can be found in the Medicare Encounter Data User Guide.
**CLM_CNTL_NUM**

**LABEL:** Claim Control Number

**DESCRIPTION:** The claim control number is an identifier assigned by the processing system (i.e., the Encounter Data System Contractor) to a claim.

This is the field that, in combination with the original claim control number, identifies a unique version of a service record.

**SHORT NAME:** CLM_CNTL_NUM

**VALUES:** —

**COMMENT:** Multiple iterations of a single service (i.e., a particular type of claim for a specific service date for the person) are present in the Encounter RIFs; records are not limited to the final version of the encounter record. When multiple records for a service exist, the higher the claim control number, the later it was adjusted (i.e., the highest CLM_CNTL_NUM is the latest version of the encounter).
**CLM_DAY_CNT**

**LABEL:** Day Count (Length of Stay)

**DESCRIPTION:** This is a derived field that calculates the beneficiary's length of stay in an inpatient or SNF setting.

**CLM_DRG_CD**

**LABEL:** Claim Diagnosis Related Group Code (or MS-DRG Code)

**DESCRIPTION:** The diagnostic related group to which a hospital claim belongs. A unique identifier of a hospital case type that is based on similar clinical problems.

**SHORT NAME:** CLM_DRG_CD

**LONG NAME:** CLM_DRG_CD

**TYPE:** CHAR

**LENGTH:** 3

**SOURCE:** Medicare Advantage Organizations (MAOs)

**FILE(S):** IP base

**VALUES:** —

**COMMENT:** This is an MAO submitted field and may be different than the derived DRG code (variable called DRVD_DRG_CD).

Nonpayment claims (zero reimbursement) may not have a DRG present.
**LABEL:** Claim Diagnosis E Code I – 10 Diagnosis Present on Admission (POA) Indicator Code

**DESCRIPTION:** The present on admission (POA) indicator code associated with the diagnosis E codes (principal and secondary; fields ICD_DGNS_E_CD1–ICD_DGNS_E_CD10).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. The objective was to eventually not pay hospitals more if the patient acquired a condition (e.g., infection) during the admission. This present on admission (POA) field is used to indicate whether the diagnosis was present on admission.

**DESCRIPTION:** The type of facility.

4 = Religious Non-medical (hospital)  
7 = Clinic services or hospital-based renal dialysis facility  
8 = Ambulatory Surgery Center (ASC) or other special facility (e.g. hospice)  

**COMMENT:** This field, in combination with the service classification type code (variable called CLM_SRVC_CLSFCTN_TYPE_CD) indicates the “type of bill” for an institutional claim. Many different types of services can be billed on a Part A or Part B institutional claim, and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of two variables:  

— facility type (CLM_FAC_TYPE_CD)  
— service classification type (CLM_SRVC_CLSFCTN_TYPE_CD).  

Note that sometimes 3 variables are used for “type of bill”, where the 3rd digit is the claim frequency code (CLM_FREQ_CD).
**CLM_FINL_ACTN_IND**

**LABEL:** Claim Final Action Indicator

**DESCRIPTION:** This field is stored in the CMS Integrated Data Repository (IDR) as the final action indicator; however, CMS has verified that for 2015 encounter records, this field should not be used to identify the final version of the record. Note that the term “final action” is used differently in encounter data, compared to fee-for-service (FFS) claims.

**COMMENT:** Duplicate services across multiple final action records may exist, and users should make appropriate adjustments when identifying distinct services. Additional information regarding identification of distinct services – or identification of populations appears in the Medicare Encounter Data User Guide.

Final action records are only indicative of the latest accepted record within a claim family that has been linked by the Medicare Advantage Organization (MAO) and may not be indicative of risk-adjustment eligibility.

**COMMENT:** This code is used for encounter final action processing for all encounter claim types, including carrier.

The encounter bill type frequency codes utilize a similar nomenclature to Medicare fee for service bill type frequency codes. This field can be used in determining the "type of bill" for an institutional claim. Often the type of bill consists of a combination of two variables: the facility type code (variable called CLM_FAC_TYPE_CD) and the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD).

This variable serves as the optional third component of bill type. Many different types of services can be appear on an encounter institutional claim, and knowing the type of bill helps to distinguish them. The type of bill is the concatenation of three variables: the facility type (CLM_FAC_TYPE_CD), the service classification type code (CLM_SRVC_CLSFCTN_TYPE_CD), and the claim frequency code (CLM_FREQ_CD).
A three-part type of bill is the concatenation of three variables:

— facility type (CLM_FAC_TYPE_CD)
— service classification type (CLM_SRVC_CLSFCTN_TYPE_CD)
— claim frequency code (CLM_FREQ_CD).
**CLM_FROM_DT**

**LABEL:** Claim From Date

**DESCRIPTION:** The first day on the billing statement covering services rendered to the beneficiary (a.k.a. ‘Statement Covers From Date’).

**VALUES:** —

**COMMENT:** The "from" date on the claim may not always represent the first date of services, particularly for Home Health care. To obtain the date corresponding with the onset of services (or admission date) use the admission date from the claim (variable called CLM_ADMSN_DT for IP, SNF and HH.

For Part B Non-institutional (Carrier and DME) services, this variable corresponds with the earliest of any of the line-item level dates (i.e., in the Line File, it is the first CLM_FROM_DT for any line on the claim). It is almost always the same as the CLM_THRU_DT; exception is for DME claims — where some services are billed in advance.

**COMMENT:** When an encounter record has been adjusted, the claim control number (CLM_CNTL_NUM) for the version of the record that is being adjusted appears in the CLM_ORIG_CNTL_NUM field – and then a new CLM_CNTL_NUM is assigned to this updated record. A null/missing CLM_ORIG_CNTL_NUM indicates that a prior encounter record has not been adjusted by the Medicare Advantage Organization (MAO). **LABEL:** Claim Diagnosis Code 1 – 25 Diagnosis Present on Admission (POA) Indicator Code

**DESCRIPTION:** The present on admission (POA) indicator code associated with the diagnosis codes (principal and secondary; which are the ICD_DGNS_CD1–ICD_DGNS_CD25 fields).

In response to the Deficit Reduction Act of 2005, CMS began to distinguish between hospitalization diagnoses that occurred prior to versus during the admission. The objective was to eventually not pay hospitals more if the patient acquired a condition (e.g., infection) during the admission.

This present on admission (POA) field is used to indicate whether the diagnosis was present on admission.

**COMMENT:** The "thru" date on the claim may not always represent the last date of services, particularly for Home Health or Hospice care. To obtain the date corresponding with the cessation of services (or discharge date) use the discharge date from the encounter (variable called BENE_DSCHRG_DT).

For Part B non-institutional (Carrier and DME) services, this variable corresponds with the latest of any of the line-item level dates (i.e., in the Line File, it is the last CLM_THRU_DT for any line on the claim). It is almost always the same as the CLM_FROM_DT; exception is for DME claims — where some services are billed in advance.

This should include the prospective DRG payment (both capital as well as operational) as well as any outlier payment, which would be applicable. It does not include any pass-through amounts such as that for direct medical education nor interim payments for operating IME and DSH.

Y5 = Part B deductible, applicable for a Model 4 demonstration 64 claims

**VALUES:** 5-digit alphanumeric

**COMMENT:** The first character of the contract ID is a letter that indicates the type of plan. For local managed care contracts, it begins with 'H' or '9'; for regional managed care contracts, it begins with 'R'; for prescription drug plans (PDPs), it begins with 'S'; for fallback contracts, it begins with 'F'; for Employer-Direct PDP and Employer-Direct PFFS it begins with 'E'. The remaining 4 digits are numeric.

You need to know both the contract number and plan benefit package number (CNTRCT_PBP_NUM) in order to identify the specific plan in which a beneficiary was enrolled.

All other level II codes and descriptors are approved and maintained jointly by the alpha-numeric editorial panel (consisting of CMS, the Health Insurance Association of America, and the Blue Cross and Blue Shield Association). These are 5-position alpha-numeric codes representing primarily items and non-physician services that are not represented in the level I codes.
Level III

Codes and descriptors developed by Medicare carriers (currently known as Medicare Administrative Contractors; MACs) for use at the local (MAC) level. These are 5-position alpha-numeric codes in the W, X, Y or Z series representing physician and non-physician services that are not represented in the level I or level II codes.

Note 2:

This field may contain information regarding case-mix grouping that Medicare used to pay for SNF, home health, or IRF services. These groupings are sometimes known as Health Insurance Prospective Payment System (HIPPS) codes.

This field will contain a HIPPS code if the revenue center code (REV_CNTR) equals 0022 for SNF care, 0023 for home health, or 0024 for IRF care.

The diagnosis version code applies to all diagnoses on the claim (i.e., diagnoses appear in variables ICD_DGNS_CDX).

This field is not present in the institutional claims (inpatient, skilled nursing, home health) since the cutover occurred exactly on October 1, 2015. Although this cutover date applies to carrier/DME claims, there are some instances where a billing date could straddle the cutoff date (e.g., DME ordered vs. received dates), therefore we include this field to enable verification as to which codes are used.

COMMENT: The ICD-9-CM codes were named as the HIPPA standard code set for inpatient hospital procedures. For inpatient and skilled nursing claims, health care providers use the International Classification of Diseases version 9 (ICD-9) procedure codes to describe the service provided. Starting in October 2015, the ICD-10 Procedure Coding System (ICD-10-PCS), is used.

HCPCS/CPT codes were named as the standard code set for physician services and other health care services.
